

# Autonomous vehicle concept

The Bay Area Robotics team is comprised of hardware, software and mechanical engineers who are also robotics experts and enthusiasts. We also have specific

expertise in GIS/mapping, GPS, machine learning, and program management expertise. Our team draws members from the San Francisco Robotics Society of America; collectively we have built 100+ robots, many for competitions.

## What We Offer

**Algorithm development,** including: r/t map data interpretation, strategic nav planning, tactical environmental sensing and obstacle avoidance.

**Rolling platform integration,** including: control surface modification, integration of power, computational and sensor systems.

**Program management expertise.** Our team includes seasoned Silicon Valley tech professionals with proven track records for shepherding and delivering complex projects with limited time and resources.
